

Echo Bluff Park

Nature's Corner Club

Second Saturday every month from 10 am – 12 noon

Children will learn about the nature around us, plus take part in a seasonal activity and craft. This program is free to children (ages 3-12) accompanied by an adult.

•SEPTEMBER – Why do trees lose sticks?

We have plenty of sticks, let's find out why! Create a stick-y craft and gather sticks for a fire to make a yummy treat.

•OCTOBER – How do leaves turn colors?

Enjoy the Fall colors and learn why leaves change colors. We will collect leaves for a painting and then enjoy a Fall snack around the fire

•NOVEMBER – Why do animals hibernate?

Sleeping all winter and not playing in the snow doesn't sound like much fun, but that is what some animals do! Make a *warm* craft and have a healthy snack to prepare for hibernation.

•DECEMBER – How strong is ice?

Walking, jumping, skating and driving on ice . . . and it doesn't break! We'll test limits of ice and explore the strength of it in a fun and educational way!

•JANUARY – How do snowflakes get their shape?

Have you ever looked closely at snowflakes and notice their unique and beautiful shapes? No two snowflakes are alike – and we plan to discover why! We will enjoy the snow in many fun and *tasty* ways.

•FEBRUARY – TBA

•MARCH – Where does Maple Syrup come from?

Why from Maple trees! A Sugar Bushmaster will discuss tree-tapping and then actually tap a Maple tree! Children will taste the raw sap and enjoy a Maple Syrup ice cream cone!

•APRIL – How many animal babies do we see?

Spring time brings many birthdays for lots of our furry friends. Pet some fluffy friends and make an adorable craft.

MAY – Why do flowers smell?

Every flower has a different aroma and our little noses will find out why. Explore the Science behind Mom's smelly soap – and then make her a *relaxing* gift!
